CPMS GNXT

A More Secure World; Our Shared Responsibility

CPMS_{GNXT}

ZEAL WITH NEXT GENERATION

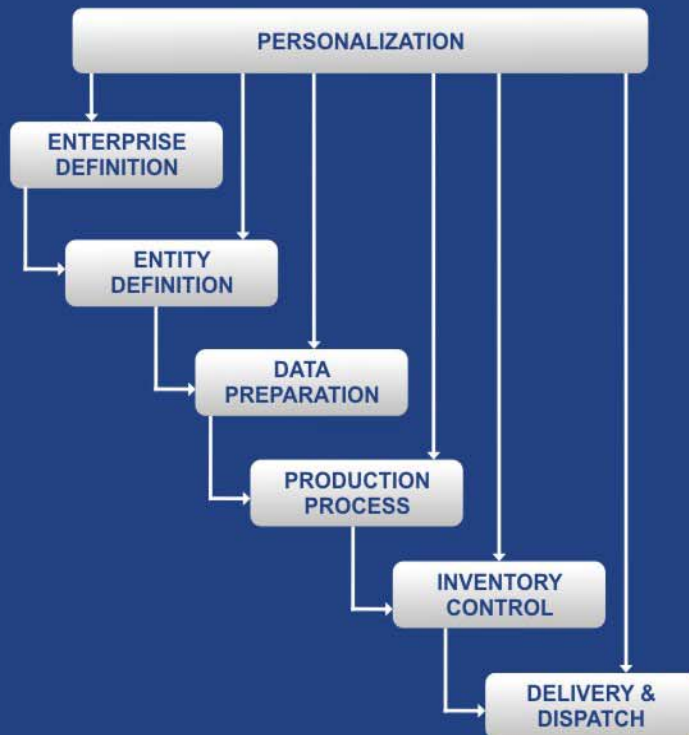

CARD PERSO MANAGEMENT SYSTEM

CPMS GNxT is an ideal partner for Card Issuance Enterprise. Our Card Personalization management software helps to achieve high efficient work flow management which is rather a challenge in today's high volume card issuance environment.

Merging jobs, Swift turnaround times and increased demand for one-to-one personalization are effectively managed by CPMS GNxT. It gives complete control over the process that drives your operation. The advanced data management capabilities help to manage jobs efficiently and distribute work to multiple personalization work centers.

CPMS GNxT helps you shorten cycle times and bring new card-based products and services to market faster.

CPMS GNxT

FEATURES

- Dual Security (ADSL or Application In-built).
- Helps in implementing the PCI-DSS 1.1 Standards.
- Grouping of data based on Enterprise configuration.
- Flexibility to customize individual client requirement.
- Split and merging of files to facilitate job optimization.
- Scheduler and Calendar to plan and schedule jobs.
- Product wise Bill of Material (BOM) for easy identification of plastic and consumables for a Job.
- Random, Sequential checking of cards for Quality Control with user defined percentage parameters.
- Work Flow Management with excellent design architecture.
- Inventory Control.
- Electronic upload of dispatch information.
- Dot Net Compiler for input file Exceptions.
- Regular Expressions for mapping the Input files.
- Scripting enabled for output files.
- MIS Reports.

Fast, cost-effective card Issuance

CPMS GNxT caters to the needs of a card personalization center in effectively managing their data, inventory and dispatch functions. It can handle multiple categories of cards. The application is divided into two parts:

1. *Card personalization enterprise* : This allows the user to define the information pertaining to number of production centers, work centers and their capacities, data definitions, suppliers, stores locations and sub stores location, personalization center's calendar, etc.
2. *Individual customer / Card category* : This allows the user to define customer's card category data definitions, products, bill of material, etc.

Pre-defined process flow navigates the user till the entire process is completed. The application takes care of data preparation, inventory control, delivery and dispatch modules.

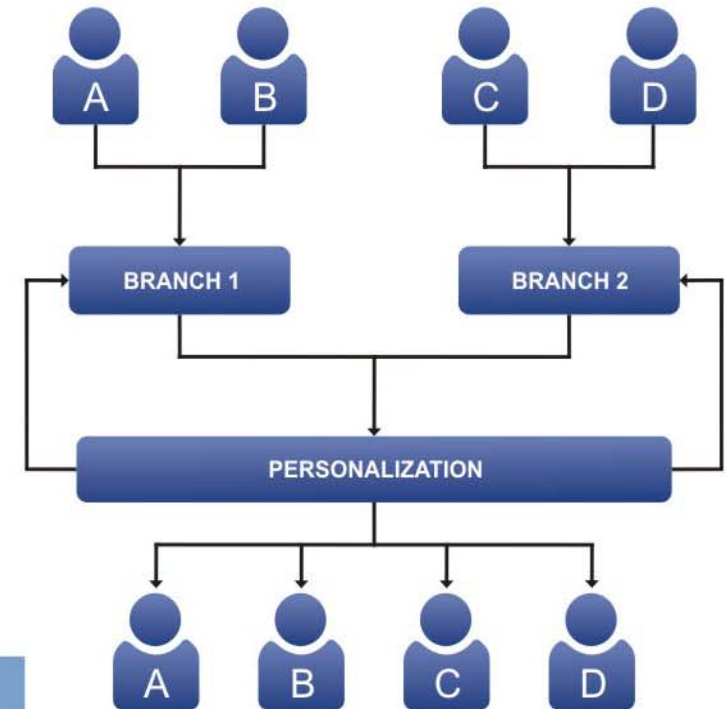

“Low Cost per Card”

BENEFITS

- Faster production
- Reduces cost and time with scheduling of Job
- Higher accuracy with maximum QC pass percentage
- Shorter lead time
- Streamlined workflow
- Automated job creation
- Intuitive wizard based GUI
- Elimination of data redundancy
- Implementation services offered

Central Issuance

“All time
High yields”
